Art Unit: 1774

Applicant's election of the invention directed to article limitations, i.e., claims 1-13, is hereby acknowledged. Such election is done without traverse.

1. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 2, the phrase, "the mat" lacks proper antecedent basis. In claim 1, lines 2 and 3, the word, "good" is not understood as the word fails to define permanent properties. Such word is relative to respective readers/one of ordinary skill in the art.

In claim 11, lines 1-2, "ammonium bisulfite" is circular. Applicant cannot use a limitation to define said same limitation. See claims 12 and 13 for similar problems.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 3-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taylor et al(US 5578371) in view of Lokietek et al(US 6841039 B1).

The cited primary reference teaches the basic claimed invention including fiber material bonded by a formaldehyde binder of specific weight amounts containing including a bisulfite compound of specific amounts- col 3, line 61- col 4, line 19; col 4, lines 27-54; col 6, lines 23-30; claims 1 and 20. Although the primary reference teaches glass fiber

mat(see above; claim 20). The primary reference fails to teach such fibers being polymeric. The secondary reference to Lokietek et al, however, teaches that it is known in the art apply binder material to fiber material, including polyester fiber material, col 1, lines 20-21, such as that taught in the primary reference – col 1, lines 36-53; col 5, lines 5-35; col 9, lines 60-63. It would have been obvious to one of ordinary skill in the art at the time the invention is made to combine the teaching of the secondary reference and bond such notoriously well known fiber material such as polymeric fibers with the primary reference's binder, in the absence of unexpected results. Such a combination would have been obvious as both references teaches utilizing binder material to bond fibrous material. Concerning claims 3-10, the primary reference teaches ammonium bisulfite of similar composition- col 4, lines 27-65; see Table 1; claims 4-8; 11; 19. Concerning claims 11-13, the secondary reference teaches polyester fiber material as discussed above- see above, col 1, line 21. The primary reference also teaches the claimed as also claimed- see above; also see references.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lokietek et al('039) and Taylor et al('371) as applied to claims 1,3-13 above, and further in view of Hummerich et al(US 6071994).

Hummerich et al teaches that it is known in the art to utilize acrylic copolymeric material in binder composition- col 2, line 52; col 3, lines 1-22; col 5, lines 14-21; col 6, lines 15-20; col 9, lines 30-44; col 10, lines 20-45. It is noted the reference teaches its binder mixed with formaldehyde- col 10, lines 9-13.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Taylor et al(US 5719228),Greene(US 5160679) and Bainbridge et al(US 5612405) are cited of interest for their respective teachings as set forth and additionally to show the state of the art..
